Lab -1

Objective: (i) To create Logo design in Macromedia Freehand
(ii) To be familiar with tools in the software, Macromedia Freehand.

Materials:

Software used: Macromedia Freehand

Theory:

Logo design is the process of creating a visual symbol by blending of images and graphics used in multimedia. It involves combining shapes, text and colour to create a unique identity. An image serves as a spatial representation of an object in either 2D or 3D scene. Images are available in multiple formats such as JPEG, GIF, PNG, etc. A well designed logo should feature good typography.

Graphics formats are defined through graphic primitives and their attributes, which can either be bitmap or pixmap. A bitmap consists of an array of pixel values mapped one by one to pixels on a screen. A pixmap, on the other hand, is a broader term describes a multi-bit per pixel image.

There are primarily two types of graphics

1. Raster Graphics

- composed of pixels

2. Vector Graphics:

- represented mathematically such as through lines

Steps:

1. Use the Ellipse tool to draw a circle while holding shift and alt
2. Duplicate the circle, reduce its size, and align it to the center of the larger circle.
3. Duplicate the inner circle
4. Select the polygon tool and set the number of sides to 3 to create a triangle.
5. Position the triangle inside the inner circle and rotate it 180°
6. Duplicate the triangle to create a star, then add text - LIKE SHAPE
7. Use both triangles to form the star, then add text inside the duplicate inner circle
8. Align the text with the inner circle.

9. Ensure the text wraps around the inner circle
10. Use the Polygon tool to create stars for the logo
11. Select the Font "Wingdings", press Shift Z to create a book icon and place it at the center of the logo

Shortcut keys =

- (i) Ctrl + Shift + D : —
It duplicates the chosen object
- (ii) Ctrl + Alt + A : —
Opens a ~~an~~ align windows to align the object
- (iii) Ctrl + Shift + < :
Decrease the font size
- (iv) Ctrl + Shift + > :
Increase the font size
- (v) Ctrl + Shift + Y
Aligns text along the circle

Tools used

- (i) Ellipse : To draw circles
- (ii) Polygon : To draw triangle and stars
- (iii) Text : To write text on the logo
- (iv) Rotate : To rotate the objects
- (v) Colors : used to color the shapes
- (vi) Rulers : To align the objects correctly

Discussion / Analysis

Macromedia Freehand MX is an application used for creating illustrations and logos. But it is not as easy as it seems. The application is hard to use to use and is outdated meaning other applications have replaced it. So it requires time to learn the tools to design. We can design a simple to complex illustrations, logos using Macromedia Freehand MX. Overall, it is a great application for designing.

→ vector versus Bitmap

Bitmap

- A bitmap contains an exact pixel by pixel value or an image
- A bitmap file is fixed in resolution
- A file size of a bitmap is completely determined by the image resolution and its depth
- A bitmap image is easier to render

vector graphics

- A vector graphic contains mathematical description of object
- A vector graphics is resolution independent
- The file size of a vector graphic depends on the number of graphic elements it contains
- Displaying a vector graphic usually involves a large amount of processing

OUTPUT:
