

Lab 3

create text animation using various effect in swish MAX

Objective

- To animate text & make it attractive
- To understand different tools, effects & shape for animating purpose

materials

software used: swish max

Theory.

Swish MAX is an advance flash reaction tools for graphic artists or web professionals. It consists of advanced drawing tools, scripting, flash video & all necessary things needed for a flash dynamic animation. It includes over 380 multimedia effect & over 300 ready to use components of vector shapes. This is used to animate text, movies etc to make text of any logo or anything more attractive & eye catching to viewer.

Steps:

- open swish max & create new file
- use rectangle tool to create rectangle shape
- fill colours, gradient to shape using properties window
- use text tool to type text
- change font colours, size, style etc using properties window
- Now add effects in scene 1 to text as required time let's say 20 sec.
- click 20 sec, click insert then effect
- Now choose desired effect, let's say Fade in
- we repeat this steps & add another effect Fade out

- click control & play movie to see animation
- export file as ~~swf~~ SWF file
